

SUMMARY

Software Engineer with 5+ years of experience building production systems across B2B commerce, healthcare, fintech, travel, cybersecurity, and consumer products. Strongest in backend platforms, APIs, asynchronous workflows, third-party integrations, modernization, and performance optimization, with hands-on full-stack delivery from product requirements to production rollout.

SELECTED IMPACT

Built platform foundations for B2B commerce

Shared service setup, auth/RBAC, audit logging, outbox, CDC, product, order, payment, notification, and translation workflows.

Delivered healthcare SaaS and AI workflows

Telehealth operations, multi-tenant patient portals, payment flows, and event-driven DNA processing with retry and auditability.

Reduced key page loads from 23s to 2s

Optimized SQL queries and database structure for Finexis eKYC; another representative page improved from 26s to 5s.

Modernized aging production systems

Upgraded Django 2 to 4, moved background jobs to cloud-managed scheduling, and refactored legacy code for maintainability.

SKILLS

Languages & APIs	Python, TypeScript, JavaScript, REST, gRPC, GraphQL
Frameworks	Django, FastAPI, NestJS, Node.js, React, Next.js
Data	PostgreSQL, MySQL, MongoDB, Redis, query & schema optimization
Messaging & Workflows	Kafka, Debezium CDC, NATS JetStream, Celery, Temporal
Infrastructure	AWS, Google Cloud, Docker, CI/CD, Nginx, Turborepo monorepo

WORK EXPERIENCE

Arobid Tech JSC · Backend Engineer

02/2026 – Present

Arobid B2B Marketplace Platform

NestJS · TypeScript · PostgreSQL · TypeORM · gRPC · Kafka · Debezium CDC · Temporal · Redis · VNPay

- Helped build the shared backend foundation for a B2B marketplace spanning catalogs, RFQs, orders, payments, notifications, translation, and digital expo workflows.
- Designed platform-wide authentication, RBAC, audit logging, and transactional outbox patterns; implemented CDC pipelines with Debezium and Kafka Connect for reliable event delivery.
- Delivered end-to-end product listing with review/approval workflows, optimistic locking, and version history to protect concurrent edits.
- Contributed to Temporal-based order orchestration and built VNPay payment workflows covering initiation, callbacks, and transaction tracking.
- Built a provider-agnostic translation service (internal AI, Google Translate, LLMs) with per-language fallback chains, glossary protection, caching, and batch processing.

Gkim Digital Ltd · Backend Engineer

09/2024 – 02/2026

DNA Insights Platform

NestJS · TypeScript · PostgreSQL · MongoDB · gRPC · NATS JetStream · Turborepo

- Designed and built an event-driven backend platform for AI-assisted DNA processing, establishing a Turborepo monorepo with clear service boundaries and ownership.
- Owned backend architecture decisions for internal service communication and asynchronous processing, integrating with external AI/ML pipelines.
- Designed reliable workflows for long-running DNA processing tasks: state tracking, retries, failure recovery, and auditability across PostgreSQL and MongoDB.
- Built internal admin tools giving operations teams visibility into system state and processing progress.

Telehealth Core Platform

Django · Python · PostgreSQL · AWS · Celery · NMI · Stripe · React

- Maintained and evolved a production telehealth platform connecting patient records, provider operations, laboratory interactions, appointments, and care workflows.
- Optimized PostgreSQL queries, schema design, and connection handling, improving API performance and system stability.
- Designed and maintained Celery workflows for asynchronous processing and scheduled jobs; integrated NMI and Stripe payment flows for telehealth billing.
- Collaborated with frontend and product teams to design stable, well-defined APIs and consistent data flow.

E4G Multi-Tenant Healthcare Platform

NestJS · TypeScript · Django · PostgreSQL · REST APIs · Webhooks · RBAC

- Built multi-tenant foundations: tenant provisioning, data and configuration isolation, RBAC, and separate global/tenant administration.
- Enabled healthcare partners to launch branded patient portals with configurable offerings and appointment booking, synchronized via webhook-driven workflow templates.

Golden Owl Consulting · Software Engineer

03/2022 – 09/2024

Finexis eKYC

Django · Python · MySQL · Celery · AWS

- Built eKYC verification workflows and mobile-facing REST APIs for digital customer onboarding, with Celery background processing and third-party insurance integrations.
- Optimized SQL queries and database structure, cutting representative page load times from 23s to 2s and from 26s to 5s.
- Refactored legacy code to improve maintainability and data-access efficiency.

The Luxe Nomad

Django · Python · PostgreSQL · Celery · GCP · ReactJS · Bootstrap

- Designed Django REST APIs and third-party integrations for booking, sales, marketing, and reporting workflows in a luxury vacation rental operations platform.
- Migrated Celery tasks and cron jobs to Google Cloud Tasks and managed scheduling; upgraded Django 2 to 4.
- Managed deployment, performance, security, and cloud cost; consulted directly with the client on business requirements.

Watchtowr

NextJS · NestJS · ChakraUI · Apollo · GraphQL · Kafka

- Developed GraphQL APIs and frontend features for onboarding and managing external security assets on an exposure-management platform.
- Implemented automated PDF report generation and maintained production services, improving overall reliability.

Hoplite Technology

TypeScript · ReactJS · NextJS · Python · AWS Lambda · FastAPI · MongoDB · Nginx

- Built AI-powered chat tools with NextJS and the OpenAI API; designed serverless REST APIs with AWS Lambda and API Gateway.
- Implemented streaming responses to work around API Gateway timeouts; optimized page load and API responsiveness; set up Nginx reverse proxy.

TurisVPN

Django · Python · Celery · CKEditor

- Built a scheduled email campaign feature for marketing using CKEditor 5 and Celery.
- Set up performance debugging tooling and fixed N+1 query issues, speeding up data-heavy Django Admin pages.

Clinger

NestJS · TypeScript · PostgreSQL

- Developed core backend features (profiles, matching, messaging) for a mobile dating app; integrated automated nudity detection for content safety.
- Redesigned database schemas and optimized queries to improve data integrity and responsiveness; refactored legacy modules for maintainability.

EDUCATION

Ho Chi Minh City University of Technology · Electrical Engineering (Telecommunication), P.F.I.E.V

2017 – 2022
